The Green Growth Asia Foundation is a not-for-profit organisation incorporated in Malaysia that is dedicated to supporting and promoting strong, inclusive and sustainable economic growth in developing countries and emerging economies. Whilst based in Malaysia, we work in partnership with other likeminded organisations regionally and internationally both directly and through many strategic partnerships.

The Green Growth Asia Foundation bases its own strategy on the direction and guidance provided by the UN's Sustainable Development Goals (SDG) and our programmes and projects work towards achieving selected SDG indicators. In order to reinforce the link between our work and these SDG indicators, our programmes and projects establish their own indicators that are linked to the SDGs and therefore aim to establish the contribution that we are securing towards the SDG indicators and broader goals and vision.

What is our
GOALS

OUR GOALS

VISION

To achieve economic growth that is socially inclusive and environmentally sustainable where society fully embraces a green lifestyle.

MISSION

To promote a green growth agenda to all urban and community stakeholders through programmes, projects and activities that advance sustainable solutions in the form of knowledge, cutting edge technology and innovative financing based solutions.

THE GOALS

The following goals represent the outcomes that GGAF is working towards in Asia:

1. Economic growth is being pursued through a green growth agenda
2. Society is fully included in the benefits of economic growth leading to poverty eradication, higher living standards and enhanced well-being
3. The Environment is healthy and is not being depleted or adversely impacted by economic and social development
4. Education for Sustainable Development has empowered people to change the way they think and work towards a sustainable lifestyle and future

OUR WORK

Green Growth Asia Foundation is dedicated to supporting and promoting strong, inclusive and sustainable economic growth in developing countries and emerging economies. Whilst we are based in Malaysia, we work in partnership with other like-minded agencies regionally and internationally both directly and through many strategic partners.

We believe the need for change is now. Previous models of economic growth are no longer suitable as environmental pollution; natural resource depletion and overpopulation issues are casting a shadow on our future. Instead of focusing merely on economic growth, we embrace green growth development that takes both environmental sustainability and social inclusivity into consideration. Being sustainable isn't just about being green, it's also making sure that we are able to adapt and cope with our daily lives.

The ICLEI South Asia has played a catalytic role in the formation of Green Growth Asia Foundation believing that it will fill the knowledge and green growth project implementation gap that they perceived exists.

Green Growth Asia Foundation now seeks to play this role and serve in a mobilising capacity that brings affected stakeholders seeking to mount a response across a wide range of environmental and sustainability themes into contact with private sector and academic solution providers and their technology and methodologies. In addition to this approach, Green Growth Asia Foundation conceives and implements its own projects.

What do we
DO

OUR SUSTAINABILITY PILLARS

In order to develop a sustainable Green Growth Strategic Framework that is capable of responding effectively to the sustainability challenges that the people and the planet are facing, it is helpful to categorise these challenges in terms of the interaction between four complex systems: the world economy, the global society and the planet's physical environment and to recognise that education represents a crucial and viable response and intervention.

By understanding these societal goals it is possible to design education based interventions that are specifically tailored and targeted to respond to these societal goals. The SDG and ESD therefore call for green growth to be pursued along the following four clear Pathways:

SDG Led Pathways towards Global Transformation

Economic
Growth
Pathway

Inclusive
Growth
Pathway

Sustainable
Environment
Pathway

Sustainability
Education
Pathway

Our
DIRECTION

OUR APPROACH

We believe that a stakeholder based approach represents the most effective way to mount a successful response to the increasing sustainability challenges faced by cities and communities. GGAF therefore actively pursues opportunities for city and community stakeholders from Asia and around the world to come together and consider the challenges that arise from a range of sustainability themes and importantly the inclusive measures and solutions that are available to them. The stakeholder network that we continue to build is naturally focussed around cities and communities as our targeted impact area and contains the following key stakeholder categories, which are in line with our Vision:

Central and local governments

Responsible for establishing a legislative and regulatory framework that is conducive to achieving sustainability objectives and in establishing authority for the enforcement.

City and community municipal organisations

City and community organisations and leaders are on the front line and provide a specific locational context to sustainability themes, both in terms of the destructive impact that poor economic development practices are having on their cities and communities and in mounting effective responses to these practices. Their experiences are important to shaping appropriate responses.

Financial Institutions

Financial institutions are critical in supporting stakeholders through innovative financing solutions and business models. It must be recognised that government and municipal organisations operate within tight budgetary constraints.

Academia

Academia provides crucial support in understanding the current situational context and potential future scenarios for sustainability related themes together with the development of suitable technologies as solutions. Science is crucial in achieving sustainable development.

How We
WORK

RCE MELAKA : REGIONAL ESD HUB

The Green Growth Asia Foundation had established RCE Melaka; a centre that aims to be fully operational by January 2022. The RCE Melaka are officially recognised by the United Nations University and it will be joining the 179 members strong network to promote education for sustainable development. The idea of uniting professionals and academics communities for the single purpose of safeguarding our future is the foundation for the creation of RCEs. RCE Melaka will certainly provide linkage with other RCEs in Malaysia and globally, to provide a lasting impact on the community and environments by collectively finding solutions for environmental problems through education.

The Green Growth Asia Foundation is known to be actively involved in the planning and implementation of high impact green projects in Malaysia. Hence, the introduction of RCE Melaka indeed will further amplify our effort and strengthen the impact of stakeholders' engagement within the community. We are empowering the participants to take the lead in addressing environmental issues as global citizens through various international programmes.

The Regional Centres of Expertise will serve as a bridge for formal and non-formal educators to come together and support the implementation of education for sustainable development initiatives, creating more leaders of tomorrow. Without a doubt, RCE Melaka will transform the sustainability landscape in Melaka and her surrounding area forever.

The RCE Melaka is officially recognised by the United Nations University and will join the 179 members strong network to promote education for sustainable development.
